■ Mechanical Specification for 25W Phase/Triac Dimmable Driver with junction box J12-2

■ Dimming Operation

※The Pulse-Width Modulation (PWM) of output voltage can be adjusted through input terminal of the AC phase line(L) by connection a triac dimmer.

※Usually matching with leading edge/Forward Phase Triac Dimmers(Can customized as a driver only matching trailing edge/reverse phase Triac Dimmers if needed).

※Please try to use dimmers with power at least 2.5 times as the output power of the driver.

※for Forward phase,Magnetic low voltage and Triac Dimmers

■ **Warning**

※Prevent to reverse polarity;

※Risk of Electric Shock. When used outdoors, install only on a circuit protected by a Class A GFCI;

※Risk of Fire. Installation involves special wiring methods to run wiring through a building structure. Consult a qualified electrician;

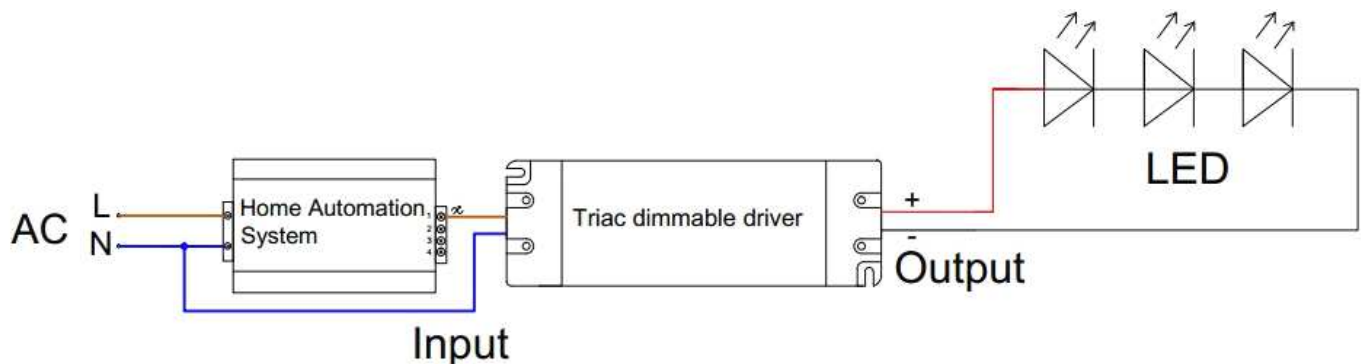

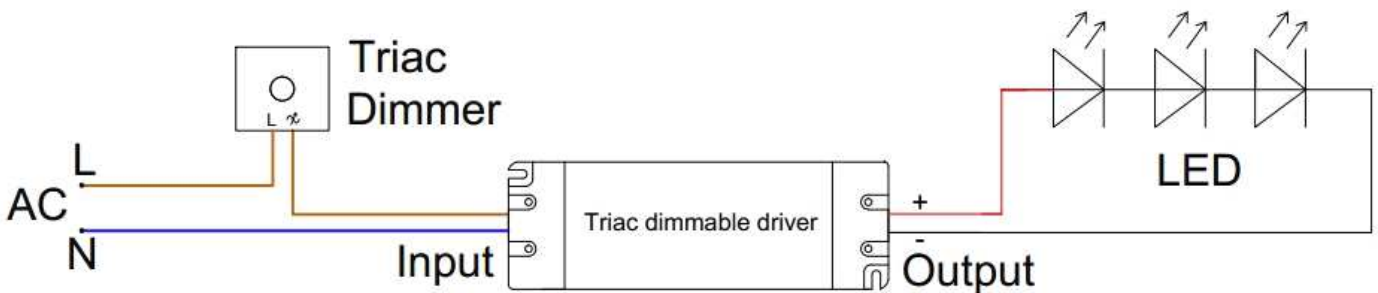

※Risk of Electric Shock. Mount the unit at a height greater than 1 foot from the ground surface.

■ **Derating Curve**

※To extend their life, please refer to the Derating Curve and derate according to the temperature
